Paper Specific Instructions

1. The examination is of 3 hours duration. There are a total of 60 questions carrying 100 marks. The entire paper is divided into three sections, A, B and C. All sections are compulsory. Questions in each section are of different types.

2. Section – A contains a total of 30 Multiple Choice Questions (MCQ). Each MCQ type question has four choices out of which only one choice is the correct answer. Questions Q.1 – Q.30 belong to this section and carry a total of 50 marks. Q.1 – Q.10 carry 1 mark each and Questions Q.11 – Q.30 carry 2 marks each.

3. Section – B contains a total of 10 Multiple Select Questions (MSQ). Each MSQ type question is similar to MCQ but with a difference that there may be one or more than one choice(s) that are correct out of the four given choices. The candidate gets full credit if he/she selects all the correct answers only and no wrong answers. Questions Q.31 – Q.40 belong to this section and carry 2 marks each with a total of 20 marks.

4. Section – C contains a total of 20 Numerical Answer Type (NAT) questions. For these NAT type questions, the answer is a real number which needs to be entered using the virtual keyboard on the monitor. No choices will be shown for these type of questions. Questions Q.41 – Q.60 belong to this section and carry a total of 30 marks. Q.41 – Q.50 carry 1 mark each and Questions Q.51 – Q.60 carry 2 marks each.

5. In all sections, questions not attempted will result in zero mark. In Section – A (MCQ), wrong answer will result in NEGATIVE marks. For all 1 mark questions, 1/3 marks will be deducted for each wrong answer. For all 2 marks questions, 2/3 marks will be deducted for each wrong answer. In Section – B (MSQ), there is NO NEGATIVE and NO PARTIAL marking provisions. There is NO NEGATIVE marking in Section – C (NAT) as well.

6. Only Virtual Scientific Calculator is allowed. Charts, graph sheets, tables, cellular phone or other electronic gadgets are NOT allowed in the examination hall.

7. The Scribble Pad will be provided for rough work.
SECTION – A
MULTIPLE CHOICE QUESTIONS (MCQ)

Q. 1 – Q.10 carry one mark each.

Q. 1 One of Koch’s postulates states that the suspected causative organism should
(A) not grow in artificial media
(B) get cleared by the host immune system
(C) always be associated with other organisms and hence cannot be grown as pure culture
(D) be grown in pure culture

Q. 2 Archaebacteria differ from bacteria in
(A) lacking peptidoglycan in the cell wall
(B) lacking membrane bound organelles
(C) containing circular chromosome
(D) containing formyl-methionine as an initiator amino acid

Q. 3 Which one of the following, involving transfer of a phosphate group, is an example of substrate-level phosphorylation?
(A) ATP to phosphoenolpyruvate
(B) GTP to ADP
(C) ATP to lipids
(D) phosphoenolpyruvate to ADP

Q. 4 Lysosomal targeting of proteins involves recognition of
(A) N-terminal signal peptide alone
(B) mannose phosphorylated at 6th carbon in N-linked oligosaccharide
(C) KDEL sequence at the C-terminus
(D) dilysine motifs in the internal sequence of the protein

Q. 5 In vitro, group I introns have the ability to
(A) undergo autosplicing in the presence of an external nucleophile
(B) undergo autosplicing without the need of a nucleophile
(C) make secondary structures that are similar to that of group II introns
(D) undergo complete self-degradation

Q. 6 In polypeptide chains, the proline residue is unique in
(A) having an aromatic ring
(B) being abundantly present in most proteins
(C) being the site for phosphorylation on proteins
(D) having its side chain connected to the peptide backbone twice
Q.7 Which one of the following microscopes has working principle most similar to the way a blind person reads?
(A) Confocal microscope  
(B) Epifluorescence microscope  
(C) Atomic force microscope  
(D) Total internal reflection fluorescence microscope

Q.8 Many plasma glycoproteins are protected from uptake and degradation by the hepatocytes in liver due to the presence of a terminal saccharide moiety known as
(A) N-AcetylNeuraminic acid  
(B) N-Acetylgalactosamine  
(C) D-Galactose  
(D) D-Mannose

Q.9 In mammals, which one of the following vitamins is required in amino group transfer reaction?
(A) Riboflavin  
(B) Pantothenic acid  
(C) Folic acid  
(D) Pyridoxine

Q.10 ‘Philadelphia chromosome’ is NOT linked to
(A) cancer  
(B) hyperactive tyrosine kinase  
(C) chromosomal aberration  
(D) Down’s syndrome

Q.11 – Q. 30 carry two marks each.

Q.11 Decreasing the concentration of sodium ions from double stranded DNA solution results in decrease in T_m. This happens because of increased
(A) repulsion of bases between two strands  
(B) repulsion of phosphate groups between two strands  
(C) stacking of bases in two strands  
(D) repulsion of deoxyribose sugars between two strands

Q.12 During pre-mRNA splicing reaction, a lariat RNA is formed when the intron cleaved at the 5’ splice site gets linked by a
(A) 5’-2’ bond to a base within the intron  
(B) 5’-3’ bond to a base within the intron  
(C) 5’-2’ bond to a base at the 5’end of the immediate downstream exon  
(D) 5’-3’ bond to a base at the 5’end of the immediate downstream exon
Q.13 Match the endocrine gland in **Group A** with the hormone secreted by them in **Group B**

<table>
<thead>
<tr>
<th>Group A</th>
<th>Group B</th>
</tr>
</thead>
<tbody>
<tr>
<td>(P) Anterior pituitary</td>
<td>(i) Melatonin</td>
</tr>
<tr>
<td>(Q) Thyroid</td>
<td>(ii) Glucocorticoids</td>
</tr>
<tr>
<td>(R) Adrenal</td>
<td>(iii) Prolactin</td>
</tr>
<tr>
<td>(S) Pineal</td>
<td>(iv) Calcitonin</td>
</tr>
</tbody>
</table>

(A) P-ii, Q-i, R-iv, S-iii  
(B) P-iii, Q-iv, R-ii, S-i

Q.14 A plant producing white flower with white seed coat (dominant) was crossed with a plant producing violet flower with gray seed coat (recessive). Upon selfing of 144 F_2 progeny plants, the number of plants continuing to produce violet flower with gray seed coat will be

(A) 72  
(B) 36  
(C) 18  
(D) 9

Q.15 A dihybrid phenotypic ratio of 15:1 was obtained while making a cross of AaBb × AaBb. This is an example of

(A) cytoplasmic inheritance  
(B) incomplete dominance  
(C) complete dominance and epistasis  
(D) co-dominance

Q.16 On infection by a specific virus, a host generates cytotoxic T cells that kill

(A) infected cells expressing self MHC  
(B) infected cells expressing MHC of different genotype  
(C) uninfected cells expressing self MHC  
(D) cells infected by an unrelated virus, expressing self MHC

Q.17 Which one of the following combinations showing the chromosome numbers for human cells is **CORRECT**?

(A) Oogonium = 23, Fibroblast at G2/M = 92, Egg before fertilization = 23, Sperm = 23  
(B) Oogonium = 46, Fibroblast at G2/M = 92, Egg before fertilization = 46, Sperm = 23  
(C) Oogonium = 46, Fibroblast at G2/M = 46, Egg before fertilization = 46, Sperm = 23  
(D) Oogonium = 46, Fibroblast at G2/M = 92, Egg before fertilization = 23, Sperm = 23

Q.18 The function y=1 is an equation of a

(A) point  
(B) line with a slope of 0  
(C) line with a slope of infinity  
(D) line with a slope of 1 passing through (1,1)
Q.19 Bottle X contains 1 L of water, while bottle Y, which has the same capacity as X, is empty. Water is poured from bottle X to Y. The plot of the quantity of water in Y as a function of the quantity of water in X is

(A) an exponential function  (B) a straight line with a slope of 0  
(C) a straight line with a slope of 1  (D) a straight line with a slope of -1

Q.20 The derivative of \(2^x\) with respect to \(x\) is

(A) \(\ln(x) \cdot 2^x\)  (B) \(x \cdot 2^{x-1}\)  
(C) \(\ln(2) \cdot 2^x\)  (D) \(2 \cdot 2^{x-1}\)

Q.21 An example of transcytosis is

(A) transmission of a nerve impulse from cell to cell  
(B) a pancreatic cell secreting pancreatic juice  
(C) an infant getting antibodies from mother’s milk  
(D) a macrophage engulfing bacteria

Q.22 Which of the following techniques can be used to detect protein-protein interactions \textit{in-vivo}?

[P] Two hybrid assay  
[Q] Fluorescence resonance energy transfer  
[R] Fluorescence recovery after photobleaching  
[S] Gel-shift assay

(A) P and Q  (B) P and S  (C) Q and R  (D) P, Q and S

Q.23 The predominant mechanism of microRNA mediated regulation of gene expression is inhibition of

(A) capping of the target mRNA  
(B) translation of the target mRNA  
(C) polyadenylation of the target mRNA  
(D) transport of the target mRNA from nucleus to cytosol

Q.24 In human reproduction,

[P] spermatogenesis starts at puberty  
[Q] oogenesis starts at fetal stage  
[R] following meiosis, one oogonium produces 4 eggs  
[S] following meiosis, one spermatogonium produces 4 sperms

Which of the above statements are \textbf{CORRECT}?

(A) P, Q, R and S  (B) P, Q and S  (C) P, R and S  (D) P and S
Q.25

3’-Azido-2’,3’ dideoxy thymidine (AZT) with the structure shown above has potential to work as a drug against HIV because
(A) its ability to competitively bind reverse transcriptase and inhibit its activity
(B) its addition at the 3’ end of the growing DNA strand will terminate viral DNA synthesis
(C) it stacks between successive nucleotide bases thereby inhibiting viral DNA synthesis
(D) it binds to the minor groove of the viral DNA thereby inhibiting the binding of reverse transcriptase

Q.26  A bacterium that arose 3.5 billion years ago divides once every 12 hours. Under ideal conditions, the number of generations the bacterium has undergone will be approximately
(A) 2.6 x 10^{12}  (B) 73 x 10^9  (C) 1.06 x 10^{12}  (D) 1.3 x 10^{12}

Q.27  Which one of the following matches is CORRECT between the inhibitors given in Group A with their modes of action in Group B?

<table>
<thead>
<tr>
<th>Group A</th>
<th>Group B</th>
</tr>
</thead>
<tbody>
<tr>
<td>(P) Antimycin A</td>
<td>(i) Inhibits cyt c oxidase</td>
</tr>
<tr>
<td>(Q) Amytal</td>
<td>(ii) Blocks electron transfer from cyt b to cyt c_t</td>
</tr>
<tr>
<td>(R) Carbon monoxide</td>
<td>(iii) Inhibits adenine nucleotide translocase</td>
</tr>
<tr>
<td>(S) Atractyloside</td>
<td>(iv) Prevents electron transfer from Fe-S centers of complex 1 to ubiquinone</td>
</tr>
</tbody>
</table>

(A) P-ii, Q-iv, R-i, S-iii  (B) P-iii, Q-iv, R-ii, S-i
(C) P-iv, Q-iii, R-ii, S-i  (D) P-i, Q-iii, R-ii, S-iv
Q.28 During synthesis of N-linked glycosylated proteins in mammalian cells, which one of the following composition of sugars is originally added as a core through dolichol-phosphate precursor?

(A) 2 moieties of N-acetylglucosamine, 9 moieties of mannose and 3 moieties of glucose
(B) 2 moieties of N-acetylglucosamine, 5 moieties of mannose and 3 moieties of sialic acids
(C) 1 moiety of N-acetylglucosamine, 5 moieties of mannose and 3 moieties of glucose
(D) 2 moieties of N-acetylglucosamine, 9 moieties of mannose and 1 moiety of glucose

Q.29 For accurate determination of evolutionary relationship within elephants, an approach of choice would be to compare

(A) the size of their nuclei
(B) the size of their Golgi bodies
(C) their mitochondrial DNA sequences
(D) the number of mitochondria in their cells

Q.30 Which of the following combinations of the statements about photorespiration is CORRECT?

[P] Photorespiration generates no ATP
[Q] Photorespiration produces no glucose
[R] Photorespiration releases O₂
[S] Photorespiration does not occur in C₄ plants

(A) P and S  (B) P and Q  (C) P, Q and S  (D) Q, R and S

SECTION - B
MULTIPLE SELECT QUESTIONS (MSQ)

Q. 31 – Q. 40 carry two marks each.

Q.31 Which of the following statements are TRUE for hexokinase and glucokinase?

(A) They are both ubiquitously present in all cells
(B) They are isozymes
(C) They differ in their Kₘ for glucose
(D) They are identical in their primary structure

Q.32 Which of the following statements about mature tRNA and/or mRNA are FALSE?

(A) tRNAs end with CCA sequence at the 3’ end
(B) Both form clover-leaf structures
(C) Both are polyadenylated at their 3’ ends
(D) All tRNAs are devoid of introns
Q.33 Which of the following statements are **CORRECT** about meiosis?

(A) Bivalents are formed in meiosis I
(B) Homologous chromosomes separate from each other in meiosis I
(C) Sister chromatids are separated from each other in meiosis I
(D) Each round of chromosome segregation is followed by one round of DNA replication

Q.34 Phospho-mimic mutants of proteins can be generated by replacing

(A) serine with aspartic acid
(B) alanine with glutamic acid
(C) serine with alanine
(D) threonine with glutamic acid

Q.35 Which of the following statements are **TRUE** for phosphoinositide signaling cascade?

(A) Phospholipase A catalyzes cleavage of PIP$_2$
(B) Generation of IP$_3$ transiently increases cytosolic Ca$^{2+}$ concentration
(C) Ca$^{2+}$ facilitates the activation of protein kinase C
(D) DAG always activates protein kinase A

Q.36 A bacterial culture growing at 20 °C was shifted to 45 °C. Incorporation of which of the following fatty acids in the membrane will be beneficial for its survival?

(A) long chain fatty acids  (B) short chain fatty acids
(C) unsaturated fatty acids  (D) saturated fatty acids

Q.37 The copy number of a plasmid in bacterial cells can be determined by

(A) western blotting  (B) Southern blotting
(C) northern blotting  (D) quantitative polymerase chain reaction

Q.38 Choose the **CORRECT** statements about a nucleosome core particle

(A) It is a packaging unit of eukaryotic DNA
(B) It contains eight histones of four types
(C) It contains eight histones of five types
(D) Histones can be dissociated from nucleosome using high salt concentration
Q.39 Bacterial superantigens

(A) bind to VβCDR2 loop in T cells without being processed into peptides
(B) bind to VβCDR2 loop in T cells after being processed into peptides
(C) are recognized by B cells after being processed into peptides
(D) binds to VβCDR1 and HV4 loops in T cells without being processed into peptides

Q.40 When grown in the presence of glucose and lactose together, *E. coli* does not utilize lactose first because

(A) lactose permease is not present on the bacterial membrane
(B) glucose inhibits the synthesis of cyclic AMP
(C) glucose activates the synthesis of cyclic AMP
(D) glucose stimulates the efflux of cyclic AMP out of the cell

SECTION – C

NUMERICAL ANSWER TYPE (NAT)

Q. 41 – Q. 50 carry one mark each.

Q.41 A plasmid is digested with a restriction enzyme to produce three fragments of sizes 7 kb, 3 kb and 2 kb. To obtain 500 ng of a 3 kb fragment, the amount of plasmid required to be digested in µg is _____

Q.42 A pentapeptide consisting of amino acids with molecular weights of 165, 131, 75, 204 and 146 Da has an approximate molecular weight (in Da) of _____

Q.43 At 2 mg/mL pure tubulin concentration, a microtubule consisting of 13 protofilaments grows unidirectionally at a rate of about 2 µm/min. At this growth rate, the number of tubulin dimers (each 8 nm in length) added to the ends of the microtubule each second is ____ (decimal digits up to 2 places)

Q.44 Three sides of a triangle are 1, 1 and 0.5 meters in length. The area of the triangle in m² is ______ (decimal digits up to 2 places)
Q.45  The sum of the internal angles of a regular pentagon is ____ degrees

Q.46  A protein solution gives absorbance of 0.34 at $\lambda_{280}$ using 0.5 cm path length cuvette. Given the extinction coefficient of the protein is $3.4 \times 10^3$ M$^{-1}$ cm$^{-1}$, the concentration of protein in the solution in mM is ______ (decimal digits up to 2 places)

Q.47  The pitch of an $\alpha$-helix is 5.4 Å. The approximate length of the $\alpha$-helix consisting of 15 amino acids in Å is _____ (decimal digits up to 1 place)

Q.48  The maximum resolution in nm achieved through an oil immersion lens of numerical aperture 1.4 using an incident light of wavelength 380 nm is ______ (decimal digits up to 2 places)

Q.49  The number of NADPH molecules required for the synthesis of palmitate (C16:0) from acetyl CoA is ____

Q.50  The number of peptide fragments generated from the sequence: Ala-Trp-Val-Ala-Phe-Thr-Gly-Lys-Glu-Tyr-Asp-Ser-Lys on treatment with chymotrypsin is ____

Q.51 – Q. 60 carry two marks each.

Q.51  The prevalence of a severe form of sickle-cell anemia (ss) in an African population is 16%. The percentage of the population resistant to malaria because of heterozygous (Ss) genotype for the sickle-cell gene is ____

Q.52  The maximum velocity of an enzymatic reaction is 0.4 mole/sec. At 5 mM concentration of the substrate, the reaction velocity was found to be 0.2 mole/sec. If the enzyme shows standard Michaelis-Menten kinetics, the rate of the reaction at 10 mM substrate concentration in mole/sec is ____ (decimal digits up to 3 places)
Q.53  A chromatin fiber of 40 nm length contains 25 nucleosomes (200 bp per nucleosome). The degree of compaction of DNA associated with this chromatin fiber is ___ fold (decimal digits up to 1 place)

Q.54  A ball is dropped from a height of 1 meter. Every time the ball bounces up, it reaches 50% of the height of the previous bounce (i.e., it rises up to 0.5 meters on the first bounce, 0.25 meters on the second bounce and so on). After an infinitely long time, the total distance covered by the ball in m is ___

Q.55  Let \( y = \sum_{n=1}^{3} nx^n \). The value of \( \int_{0}^{1} y \, dx \) is ___ (decimal digits up to 2 places)

Q.56  Ram’s mother is thrice his age now. Ten years from now, she will be twice his age. Ram’s present age is ____ years

Q.57  An unbiased coin is tossed 4 times. The probability of getting exactly 2 heads and 2 tails in any order is _____ (decimal digits up to 2 places)

Q.58  Rod shaped \( E. coli \) is 2 \( \mu \)m long and has diameter of 0.8 \( \mu \)m. The average density of \( E. coli \) is \( 1.1 \times 10^3 \) g/L. The mass of single \( E. coli \) cell in pg is _____ (decimal digits up to 1 place)

Q.59  The length of each side of a regular octagon is 1 meter. The area of the octagon in m\(^2\), is ____ (decimal digits up to 2 places)

Q.60  Molecular weight of the genomic DNA of an organism is \( 3.96 \times 10^9 \) g/mol. The average molecular weight of nucleotide pair is 660 g/mol. If an average protein in this organism consists of a chain of 400 amino acid, the maximum number of proteins coded by DNA molecule will be _____

END OF THE QUESTION PAPER
