

## IELTS Writing Task 2

**Some think the current generation should take steps to protect the environment for the next generation.**

**To what extent do you agree or disagree?**

Certain environmentalists state the fact that it is the responsibility of the present generation to be responsible enough to tend the environment so that the future generation can find it a better place to live in. no matter how unfair it sounds, the statement makes sense and the burden has to be undertaken by the present generation.

People who will find discontent in the above statement will try their best to dissuade. But it must be remembered that the major detrimental effects of climate change and the present catastrophic omen started back in the 20th century by the industrial powers. There is no wonder that during the last 100 years there has been a massive increase in automobiles and air travel leading to the rapid consumption of fossil fuels which is directly linked to global warming. The 21<sup>st</sup> century is comprised of rushing population and evolution in medicine which has culminated in mass-consumption and over-production. It is outright unfairness that only the young generation gearing up for their workforce will be a victim of malicious industrialization.

Needless to say, the present generation has to be cautious about the current drastic situation that the world is in. The people in the past either deliberately or unintentionally were ignorant about the jeopardy that the individuals were throwing but the present generation needs to pay heed. The crumbling of polar caps has been a constant topic of discussion which is posing threat to the natural abode of animals. Scientists have linked the occurrence of natural disasters to this. There is no point blaming the past generations for creating this situation but when tried only the present generation can find a remedy by taking massive steps.

To conclude, it must be said that the present generation should pay enough caution to reform the decaying earth to leave the future generation in safe hands.
