

IELTS Writing Task 1

Answer:

The above diagram states information about the number of oil used in the US, China, the Middle East, and Western Europe, and Japan from the year 2009 – 2030. To provide an overview, though it is visible that the US has absorbed the majority oil but it has also suffered a drastic fall. Western Europe and Japan are noticed to survive a fall by the end of the time whereas China and the Middle East are seen to climb the consumption level.

Starting with the US, in 2009 it absorbed around 10 million and till the end of the period, it fell to over 4 million in 2030. Western Europe and Japan also accompanied each other in the fall which started from 4 million in 2009 and declined to 2 million in 2030.

China and the Middle East both started less than 2 million barrels in 2009. China is noticed to have a swift jump to below 4 million and is then stagnant until it falls slightly at the end of the period. The other one will experience a slower rise and both will intersect at 3 million barrels in 2030.
